

**Activity Book**

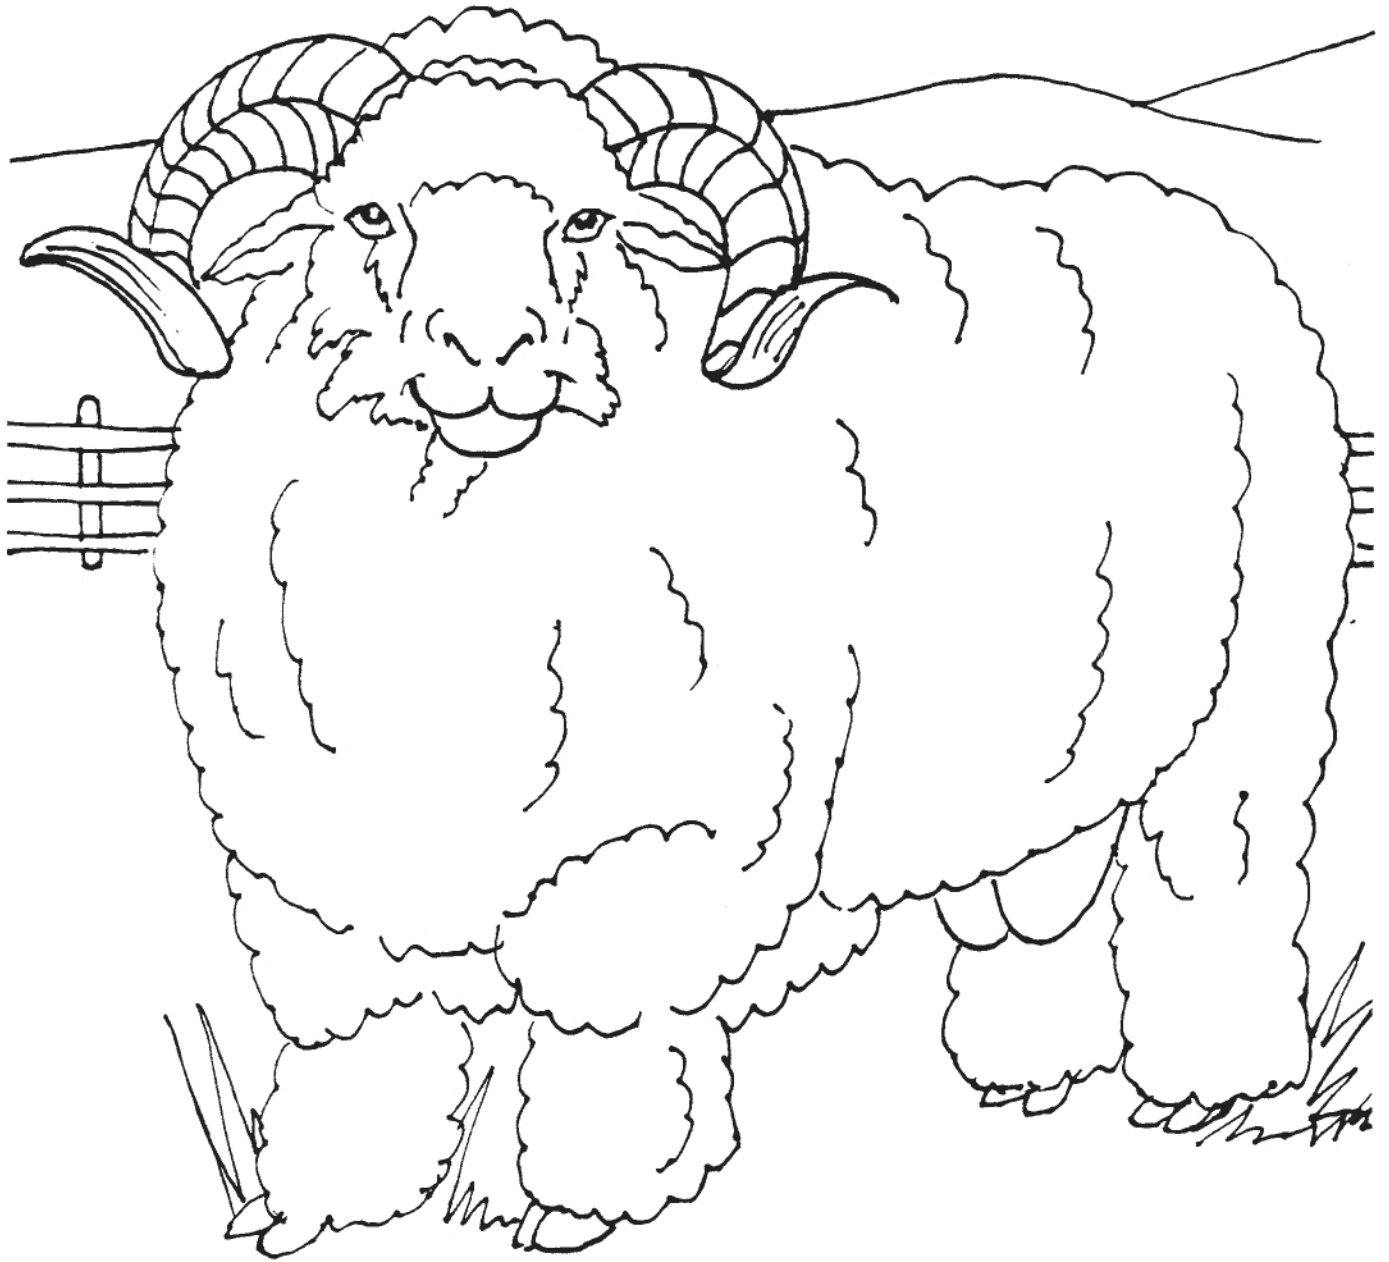

A girl sheep is called a Ewe. Sheep eat grass, weeds, and grain.

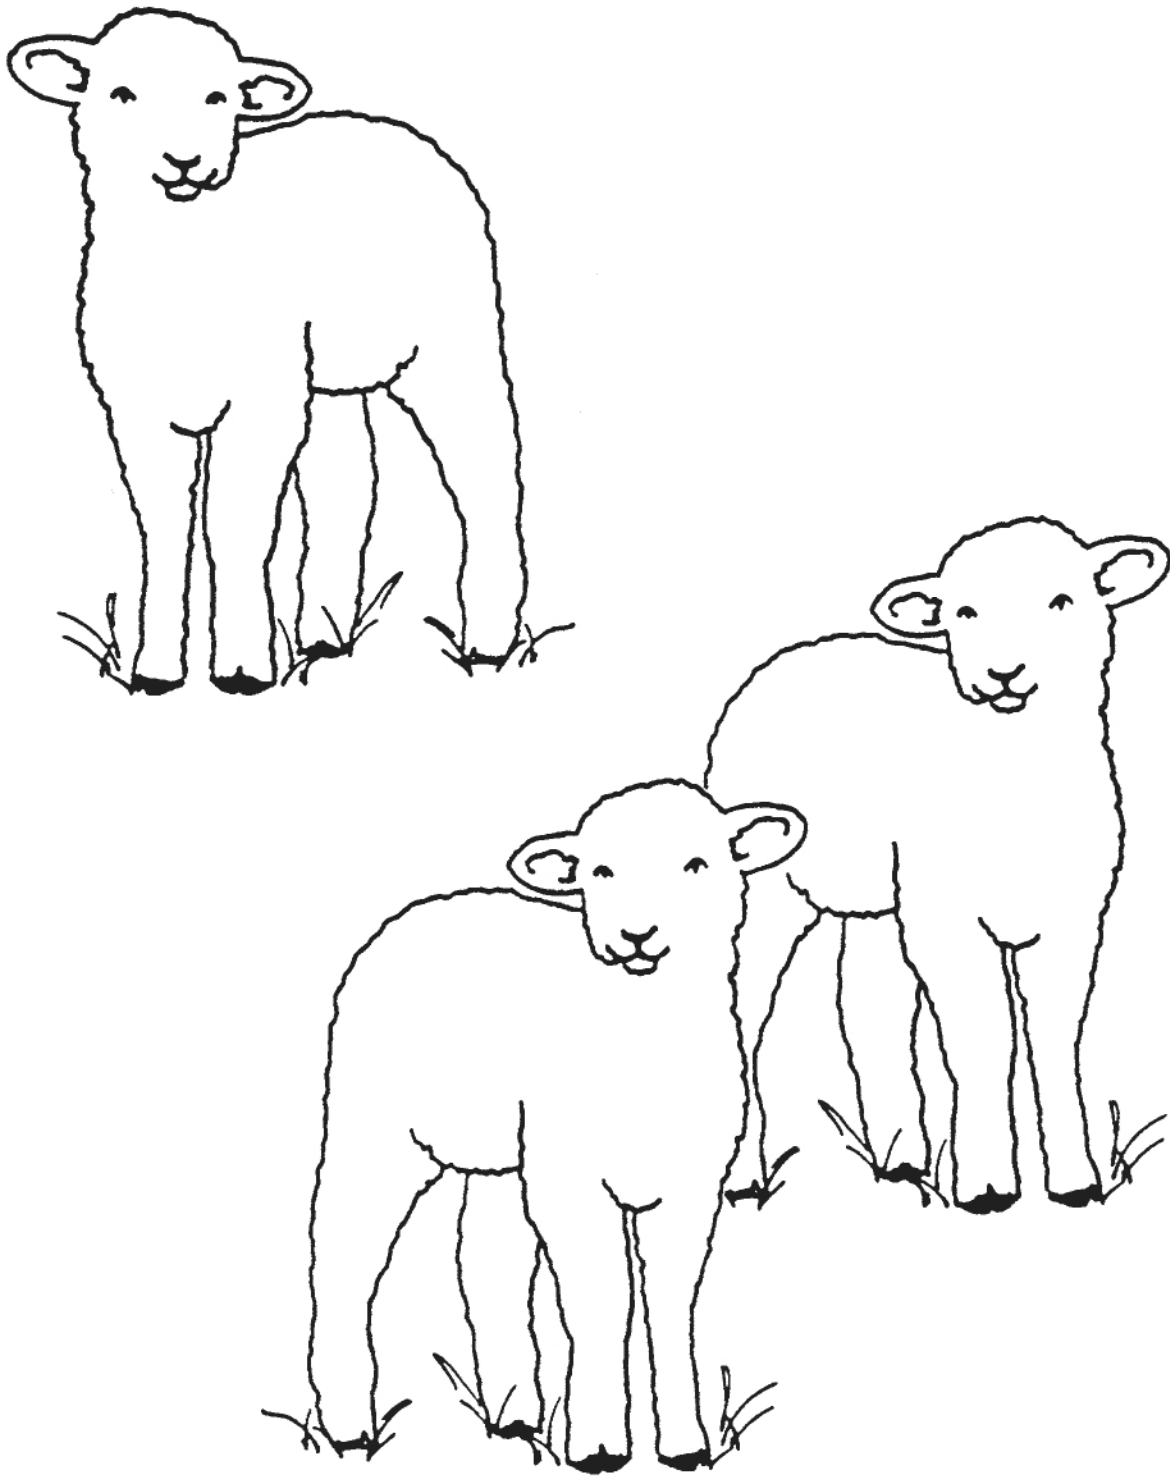

Sheep live in barns and graze in fields.  
Iowa has about 160,000 sheep and 4,000 producers.  
Draw a fence with sheep in it.

Sheep share the farm with other animals.  
Match each animal to its shadow.

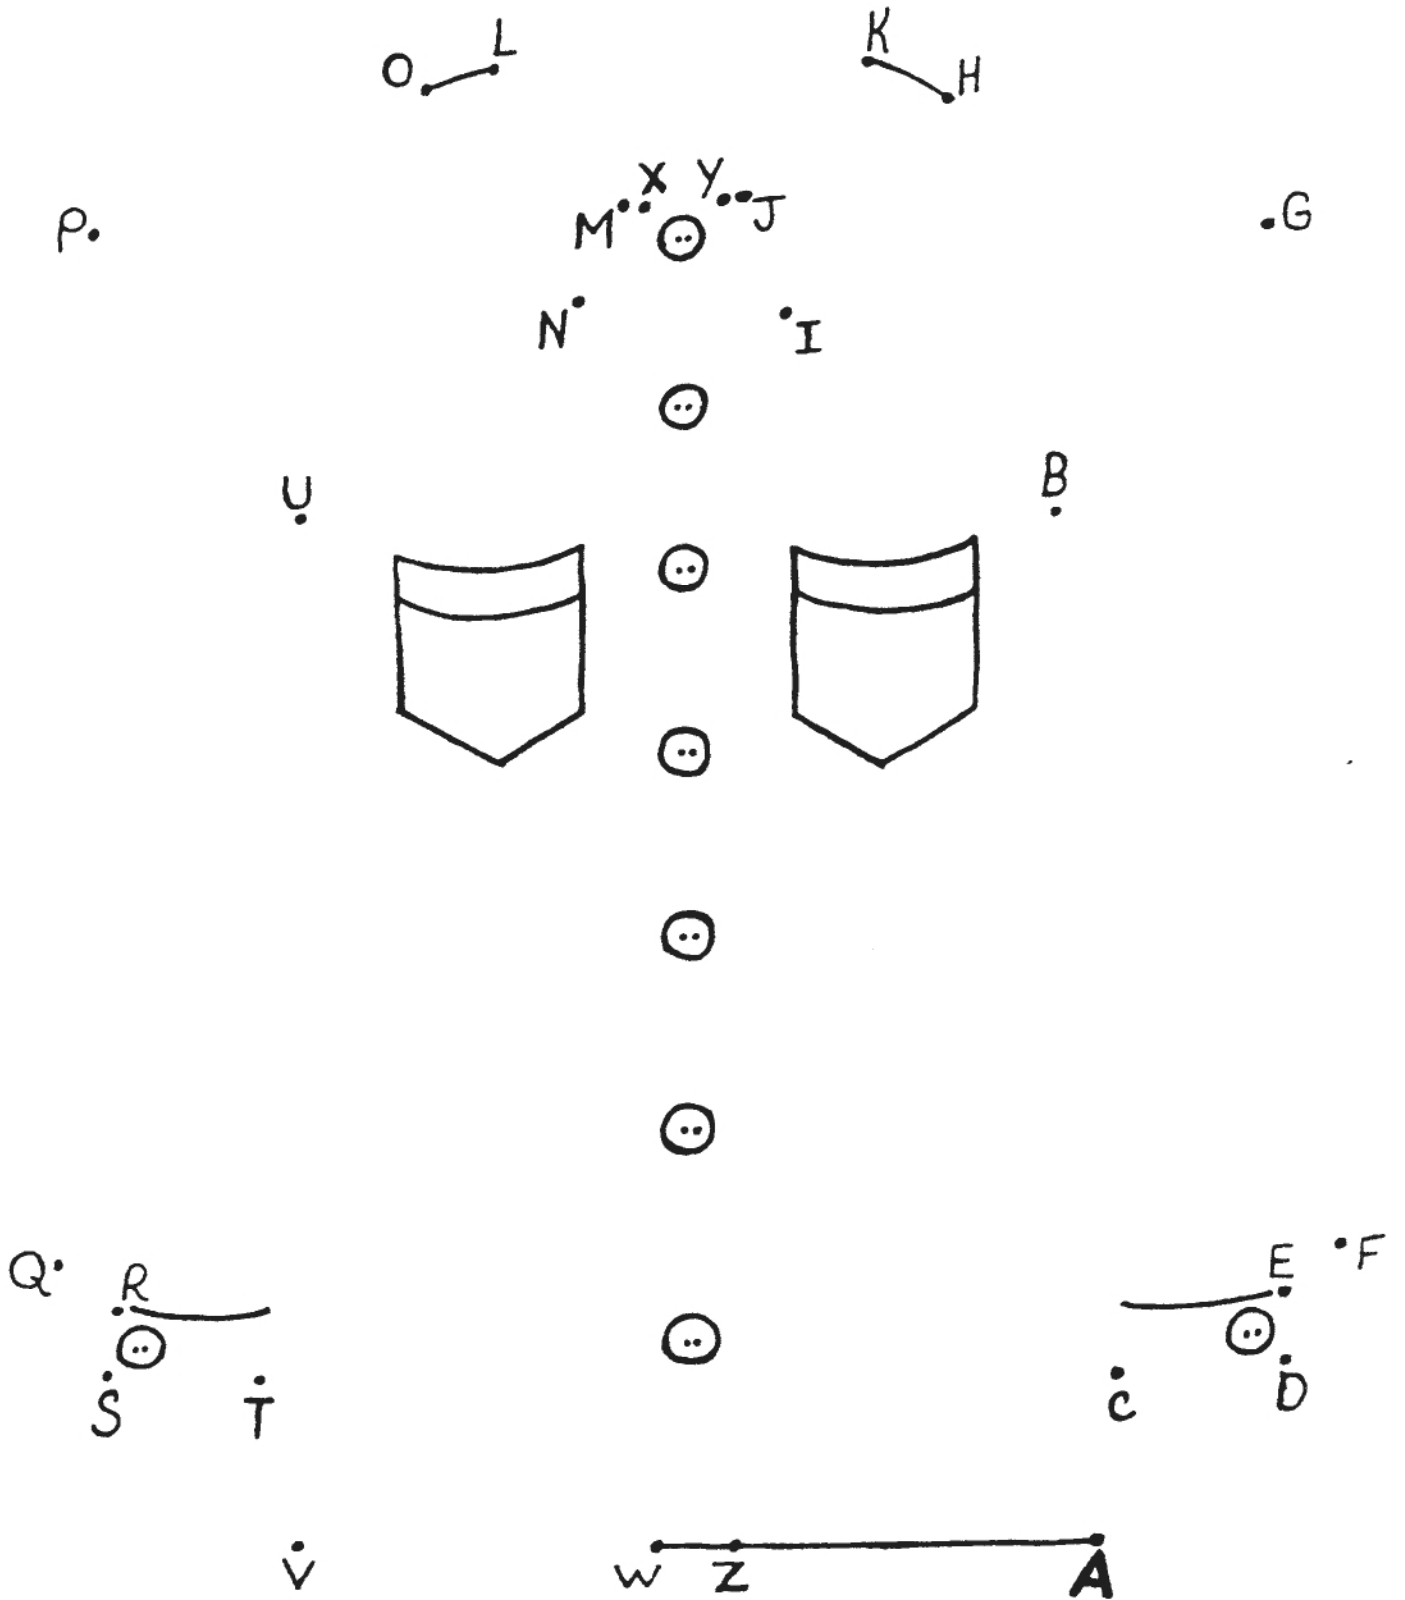

A boy sheep is called a Ram. Sheep are raised to give us meat and wool.

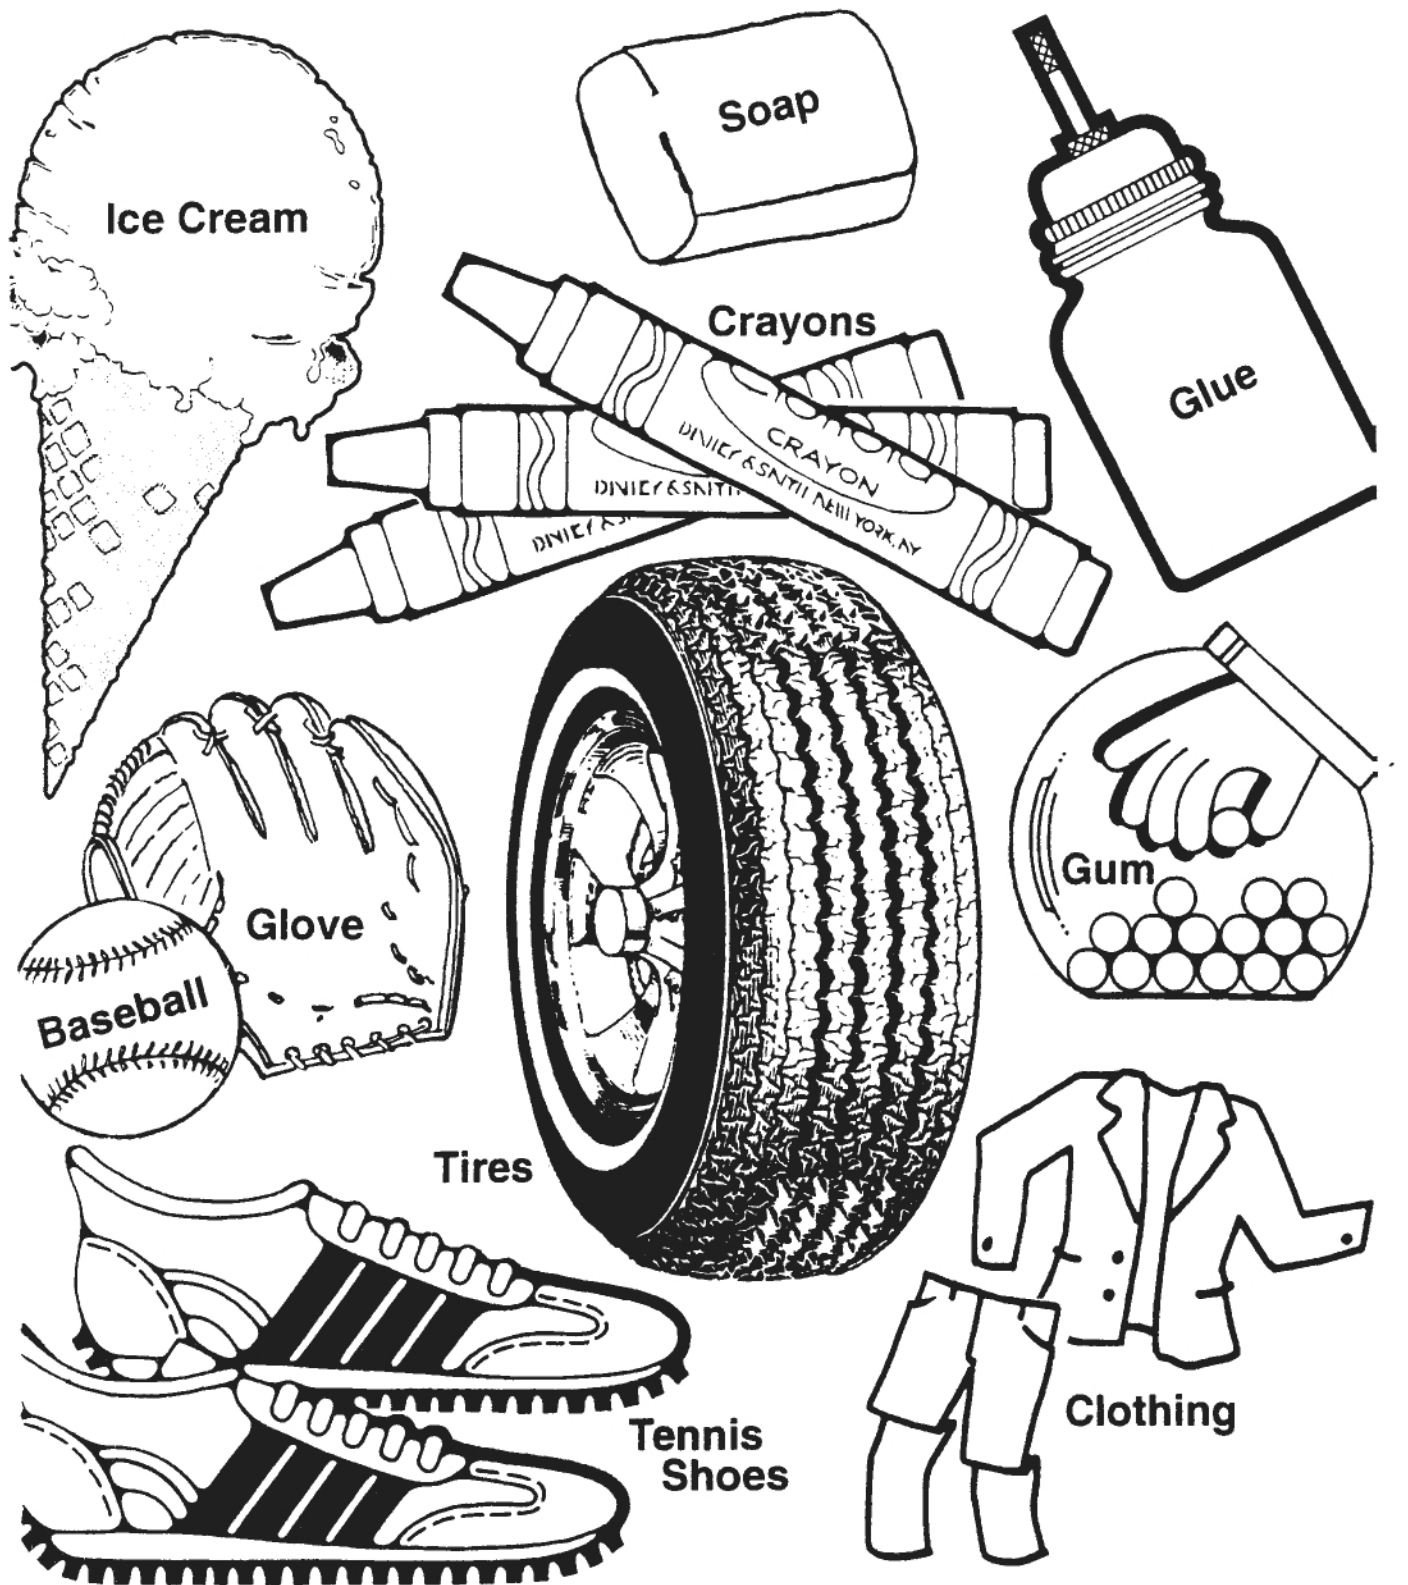

A young sheep is called a Lamb. Most lambs are born in the spring. Lambs stay with their mothers (called ewes) for about four months. They can eat grass and weeds soon after they are born. Some lambs are white, some are black and some have brown and black spots.

Color these lambs.

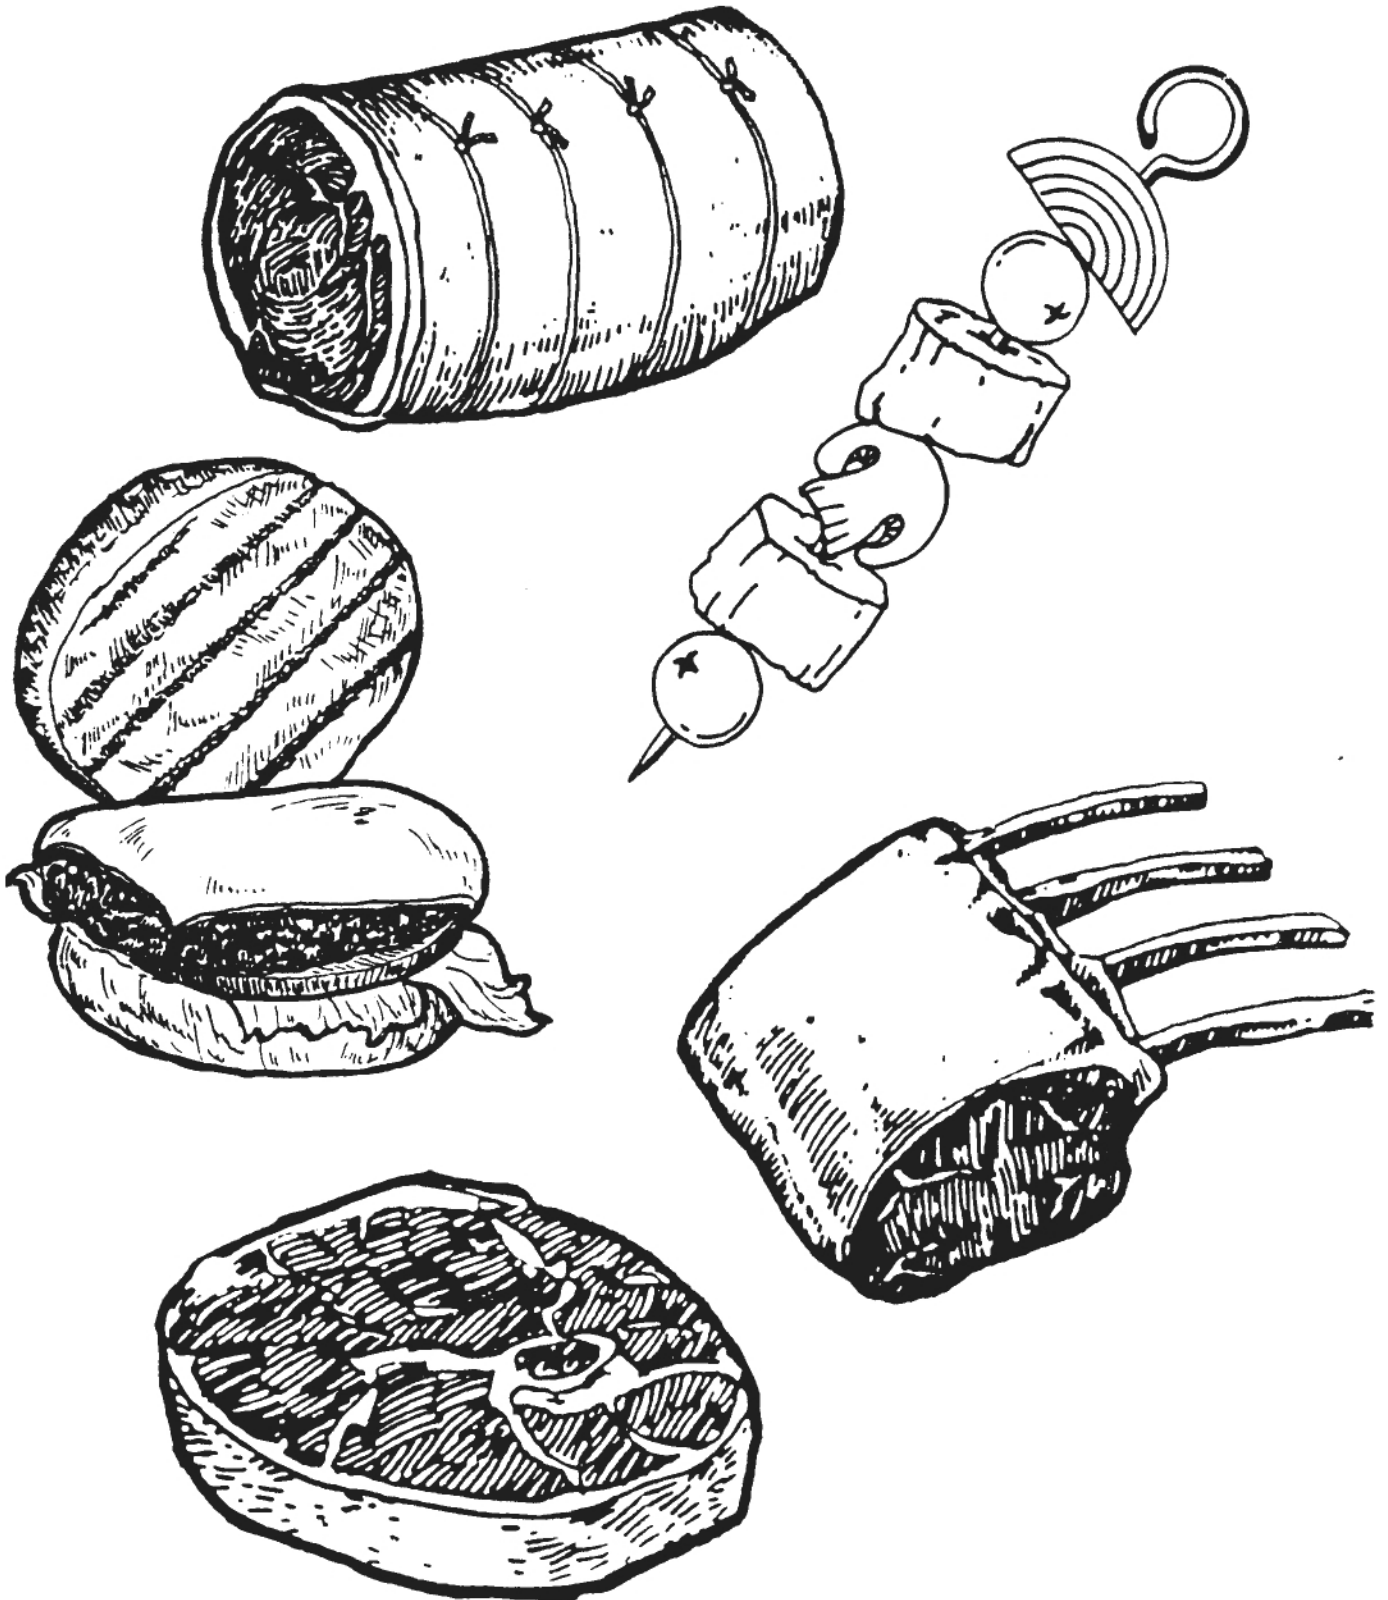

This can be made from wool and keeps you warm and dry.  
 Follow the dots from A to Z to see what it is.

Sheep give us many other things that we use everyday. Lanolin, wool and leather come from sheep. Manufacturers turn these raw products into many things we use everyday. Put an "X" through the things you use.

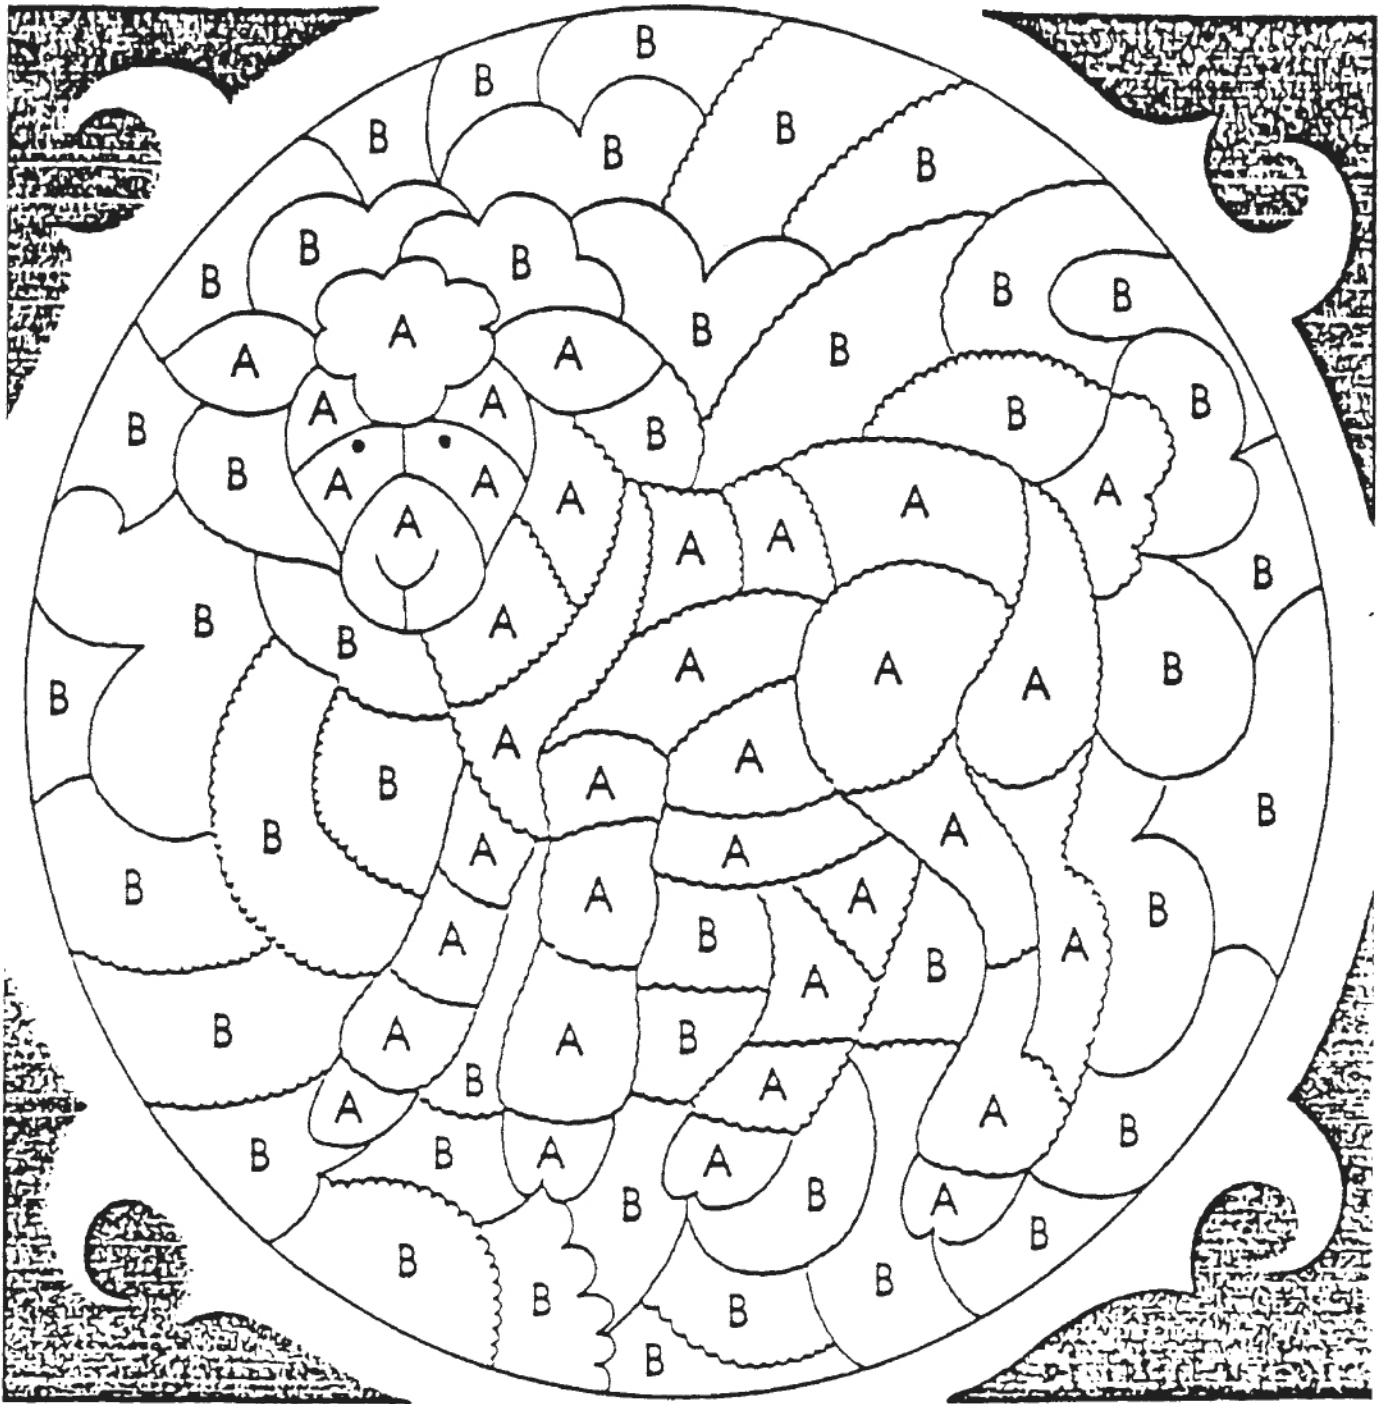

Sheep give us meat called lamb. Lamb is the meat that comes from full-grown sheep less than one year old. Lamb tastes good and is good for you to eat. It has many vitamins and minerals that help you grow up strong. Circle your favorite food from lamb.

Sheep give us wool. Wool is grown by sheep. Sheep get a haircut once a year. This is called shearing. Shearing does not hurt the sheep. The wool removed is called fleece. Wool is something that can be grown again and again. A word for this is “renewable”.  
When we renew, we help to save the Earth.

1. Color the A spaces in your favorite color.
2. Color the B spaces in another color.

Meat and Wool come from
